

Topic - History (chronological order)

In last week's lesson, we looked at world history and how we could use evidence to help us order the various buildings from history by looking at the structure, building techniques and materials used.

What do you think our buildings will look like in 2050 when you are around 40 years old?

Label the building with materials and features to show how technology, building techniques and materials have been used.

Will we live under water? In tall rise buildings? Will we build with sustainable materials? Will technology be evident in our house design?

Maybe try the same with clothing.

Have a look online to see how fashion / clothing has changed and what you predict it may look like in 2050.
